

Advanced Metering Infrastructure (AMI) is Coming to Woodcreek!

Aqua Texas is upgrading its **meter reading infrastructure** to incorporate advanced metering in your community. This new system will **provide customers with near real-time insights** into their water consumption, enabling them to better understand and manage their usage.

AMI offers an innovative way to track your water usage and provides more information and control at your fingertips. Alerts and notifications are available if a certain gallon usage is reached or if instantaneous water usage seems abnormally high.

In addition, the software includes technology for Aqua staff to improve leak detection and help you troubleshoot over the phone rather than having to wait for an on-site technician.

Installation will start this Fall.

Visit AquaWater.com/WimberleyValley to learn more about AMI.
